About Me

I'm a Mechanical Engineering student with a simple motto of 'Learning one project at a time'. I believe the best work comes from doing things you don't quite understand, breaking things, and figuring out what went wrong along the way. I have a very strong interest in engineering and thanks to my personal 3D printer this interest has the ability to flourish with many personal projects.

Education

University of Lancashire — Preston, Lancs
MEng in Mechanical Engineering — **September 2025 - Present**

Cardinal Newman College — Preston, Lancs
A-Level Mathematics, Physics and Business — **September 2023 - July 2025**
• Mathematics (A), Physics (B), Business (B)

Professional Experience

One Voice Blackburn — Blackburn, Lancs
STEM Club Lead — **September 2025 – Present**

- Plan and lead STEM workshops for young people aged 9–14, focusing on engineering, science, and problem-solving.
- Design and deliver hands-on projects such as rocket building and design challenges to inspire interest in STEM.
- Manage sessions, organise resources, and foster teamwork, creativity, and critical thinking while developing strong leadership and communication skills.

One Voice Blackburn — Blackburn, Lancs
Project Officer — **May 2024 – Present**

- Manage and maintain the organisation's Salesforce system, acting as the primary point of contact for user support, data accuracy, and issue resolution.
- Coordinate event and project logistics, including venue planning, scheduling, and operational support.
- Contribute to a range of technical and problem-solving tasks such as CAD modelling for layouts and venues, developing small automation scripts, and supporting ad-hoc project requirements.
- Work collaboratively across teams, developing strong organisational, communication, and management skills in a professional environment.

BAE Systems — Samlesbury, Lancs
Aerospace Engineering Work Experience — **November 2023 – November 2023**

- Completed a one week on site work experience where we got a chance to explore BAE Systems and learn more about what it means to be an aerospace engineer.
- Completed an engineering project where we were tasked with offering a drone solution to a sea rescue team. Was tasked with considering a drone which would aid in search and rescue efforts.
- The main focus of this was to have a detailed explanation for all parts of the system including: downtime, charging, maintenance, wind speeds and aid abilities.

Skills

- **Electronics and Robotics:** IMechE Design Challenge, Personal Projects, Arduino IDE
- **Programming:** MATLAB, Python, CSS, HTML, JavaScript, Java
- **Rapid Prototyping:** CNC (3-axis), laser cutting, and 3D printing
- **CAD and Simulations:** Solidworks, Fusion 360

Projects

IMechE Design Challenge — Preston, Lancs

Project Lead, IMechE Regional Design Competition — **February 2026 – Present**

- The IMechE host a yearly challenge which requires a mechanical system to be engineered in order to complete a pre defined mission
- For this competition I was named project lead for my team where I oversee ensuring work is completed effectively whilst also ensuring all of our systems meet the technical regulations. Alongside this I am also in charge of the electronics, where my main role is the wiring and coding of all the systems.

Fluid Dynamics — Blackburn, Lancs

Small Scale Windtunnel, Personal Project — **December 2025 –February 2026**

- As a personal project I decided to set myself the challenge of designing and building a fully functioning desktop windtunnel. My aim for this project was to create a system which would allow the visualization of airflow over small scale surfaces.
- The project helped me develop skills in CAD modelling, Electronics and Fluid Dynamics.

One Voice Blackburn — Blackburn, Lancs

Custom Ticketing Script, Python automation — **November 2025 –March 2026**

- To help aid the events at One Voice Blackburn I took on the project of developing a Python script which would create and distribute PDF tickets which could be used to scan attendees in at events
- The script helped improve efficiency by a massive 99.99%. As this script turned what would've been a turnaround of 3 weeks into a short 5 minute task of simply inputting a CSV file and clicking run.

University of Lancashire — Preston, Lancs

UAS Rebuild, Project Lead, Aerospace Society — **September 2025 –March 2026**

- At my university, the aerospace society competes in a yearly IMechE challenge where they must build a UAS which completes a pre-defined mission. Last year their plane did not manage to complete the mission due to structural and mechanical failures in their design. Because of this we were tasked with trying to get the UAS rebuilt to a stronger and better state.
- The aim of this was to gain valuable experience on working with the UAS system in order to allow us to effectively contribute to the 2026 team.
- My role was Project manager as well as Electronics Lead. My tasks were to ensure a clear plan was laid out and followed through including overlooking the redesign of many components, ensure clear communication was kept between all members and being solely responsible with getting the avionics back to a flyable state

Extracurriculars

University of Lancashire

Aerospace Engineering Society — Preston, Lancs

Pleckgate High School — Blackburn, Lancs

Head Boy, Anne Frank Ambassador, Student Council

Lancashire Police Constabulary — Lancashire

Police Cadet
